PROCUREMENT & COST COMPARISON

Anonymised portfolio sample | Illustrative data only

Purpose
This sample demonstrates a structured approach to comparing supplier quotations, checking landed costs and documenting a purchasing recommendation. All supplier names, item descriptions, quantities and prices below are fictional and do not represent an actual transaction.

1. Illustrative quotation comparison

Item / criterion	Supplier A	Supplier B	Supplier C
Sample product	Component Alpha	Component Alpha	Component Alpha
Quoted unit cost (£)	18.50	19.20	17.95
Freight per order (£)	120.00	60.00	210.00
Estimated lead time	15 days	10 days	21 days
Payment terms	30 days	30 days	Advance

2. Example cost calculation

For a hypothetical order of 100 units, estimated order cost is calculated as **(quoted unit cost × quantity) + freight**. Using the illustrative figures below:

Supplier	100-unit product cost	Freight	Estimated total
Supplier A	£1,850.00	£120.00	£1,970.00
Supplier B	£1,920.00	£60.00	£1,980.00
Supplier C	£1,795.00	£210.00	£2,005.00

3. Example evaluation and control checks

• Compare total cost rather than unit price alone, including freight and other relevant charges.

• Check lead time, payment terms, quality requirements, warranty and supplier reliability before recommending a supplier.

• Retain quotation evidence and document assumptions so another reviewer can reproduce the comparison.

• Obtain the appropriate approval before placing an order and reconcile the supplier invoice against the purchase order and goods received.

Confidentiality note: This is a fictional learning sample created for a public portfolio. It contains no real supplier details, invoice identifiers, bank information or confidential commercial data.
